Module Three Journal Guidelines and Rubric

CS 410 Module Three Journal Guidelines and Rubric

Overview

In this module, you explored the importance of reverse engineering in maintaining legacy systems due to a lack of proper documentation, as well as the process of reverse engineering to requirements. For this assignment, you will focus on how the approach of software reverse engineering differs from the approach of software requirements engineering. The following resource will help you complete this assignment:

- Software Reverse Engineering to Requirements

Prompt

In this journal assignment, you will reflect on and address questions pertaining to software requirements engineering. You are not required to use sources outside of your course reading material, but you can emphasize and support your thinking. Specifically, you will address the following questions:

- **Define**: What is software requirements engineering?
- **Purpose**: Why is software requirements engineering an important part of the software development life cycle?
- **Comparison**: How does the approach of software reverse engineering differ from the approach of software requirements engineering?
- **Impact**: What are your thoughts on the proposed new integrated approach of round-trip engineering and its impact on the computer science field?

What to Submit

Submit your assignment as a 1- to 2-page Word document with double spacing, 12-point Times New Roman font, and one-inch margins. If used, sources should be cited according to APA style.

AI Usage

If you use gen AI tools to support your work on this assignment, be sure to follow these AI usage guidelines. You must acknowledge your use of these tools in your work. Guidelines on how to cite AI tools can be found in this Shapiro Library guide.

Module Three Journal Rubric

Criteria	Meets Expectations (100%)	Does Not Meet Expectations (0%)	Value
Define	Explains what software requirements engineering is	Does not attempt criterion	18
Purpose	Explains the purpose of software requirements engineering in the software development life cycle	Does not attempt criterion	22
Comparison	Describes the differences between software reverse engineering and software requirements engineering	Does not attempt criterion	22
Impact	Discusses the impact of the proposed integrated approach of round-trip engineering on the computer science field	Does not attempt criterion	22
Clear Communication	Consistently and effectively communicates in an organized way to a specific audience	Shows no evidence of consistent, effective, or organized communication	16

Total:	100%
