Module Eight Journal Guidelines and Rubric

CS 410 Module Eight Journal Guidelines and Rubric

Overview

In this module, you learned about current trends in reverse engineering. These trends include reverse engineering the internet of things (IoT) and cloud computing. Reverse engineering cloud-based systems can provide solutions to security vulnerabilities and other concerns with this modern technology. For this journal assignment, you will reflect on reverse engineering for IoT devices and other cloud-based technologies.

Prompt

In this journal assignment, you will reflect on and address questions pertaining to software requirements engineering. You are not required to use sources outside of your course reading material, but you can emphasize and support your thinking.

Specifically, you must address the following rubric criteria:

- **Reverse engineering IoT**: Why can reverse engineering be used to improve cloud-based information technology (IT) systems?
- **Patching**: How is reverse engineering used to patch cloud-based IT systems?
- **Vulnerability**: Why is it that so many IoT devices are already infected with malware and many more are vulnerable to exploitation?
- **Impact**: How does reverse engineering impact new IT technologies, such as IoT and cloud computing?
- **Future**: Are there other new technologies that you can think of that either already use reverse engineering or should consider using reverse engineering in the future?

What to Submit

Submit your assignment as a 1- to 2-page Word document with double spacing, 12-point Times New Roman font, and one-inch margins. If used, sources should be cited according to APA style.

AI Usage

If you use gen AI tools to support your work on this assignment, be sure to follow these AI usage guidelines. You must acknowledge your use of these tools in your work. Guidelines on how to cite AI tools can be found in this Shapiro Library guide.

Module Eight Journal Rubric

Criteria	Meets Expectations (100%)	Does Not Meet Expectations (0%)	Value
Reverse Engineering IoT	Explains the “why” behind the use of reverse engineering in cloud-based IT systems	Does not attempt criterion	18
Patching	Identifies how reverse engineering is used to patch cloud-based IT systems	Does not attempt criterion	18
Vulnerability	Describes why many IoT devices are vulnerable systems	Does not attempt criterion	18
Impact	Describes the impact of reverse engineering on new technological advancements	Does not attempt criterion	18
Future	Applies understanding of reverse engineering on other modern technologies outside of IoT	Does not attempt criterion	18

Clear Communication	Consistently and effectively communicates in an organized way to a specific audience	Shows no evidence of consistent, effective, or organized communication	10
		Total:	100%
