Module Six Journal Guidelines and Rubric

CS 410 Module Six Journal Guidelines and Rubric

Overview

Throughout this module, you learned about the importance of and approaches to creating secure code. You also continued to practice converting legacy binary files to a higher-level programming language, C++. For this assignment, you will reflect on your process of converting legacy code to C++ while considering inherent security vulnerabilities.

Prompt

In your journal response, reflect on and address questions about your process to convert legacy code to C++ while considering code security and potential vulnerabilities within code. You are not required to use sources outside of your course reading material, but you can emphasize and support your thinking. Specifically, you must address the following rubric criteria:

- Define: What is a security vulnerability?
- Identify: What kinds of vulnerabilities would be identifiable in C++ code?
- Purpose: Why would you be looking for vulnerabilities during legacy to C++ conversion rather than during testing?
- Solutions: How do you determine the appropriate fix to a security vulnerability?

What to Submit

Submit your assignment as a 1- to 2-page Word document with double spacing, 12-point Times New Roman font, and one-inch margins.

AI Usage

If you use gen AI tools to support your work on this assignment, be sure to follow these AI usage guidelines. You must acknowledge your use of these tools in your work. Guidelines on how to cite AI tools can be found in this Shapiro Library guide.

Module Six Journal Rubric

Criteria	Meets Expectations (100%)	Does Not Meet Expectations (0%)	Value
Define	Explains what a security vulnerability is	Does not attempt criterion	18
Identify	Explains what kinds of vulnerabilities would be identifiable in C++ code	Does not attempt criterion	22
Purpose	Explains why you would look for vulnerabilities during conversion rather than during testing	Does not attempt criterion	22
Solutions	Discusses how to determine the appropriate fix to a security vulnerability	Does not attempt criterion	22
Clear Communication	Consistently and effectively communicates in an organized way to a specific audience	Shows no evidence of consistent, effective, or organized communication	16
		Total:	100%
